MacDonald Mines Continues to Grow its SPJ Property

Toronto, Ontario - October 3, 2019 - MacDonald Mines Exploration Ltd. (TSX-V: BMK) (“MacDonald Mines”, “MacDonald” or the “Company”) announces that it has purchased 100% interest in 38 claims, located 35 kilometres from downtown Sudbury, Ontario. The new claims add to MacDonald’s large SPJ Property package and cover prospective extensions of the potential Iron-Oxide-Copper-Gold (“IOCG”) system identified at the Scadding Mine (Figure 1). The Scadding Mine produced 914 kilograms of gold from 127,000 tonnes of mineralized material grading 7.2 g/t (OFR 5771) and the large land package surrounding the mine has also yielded multiple discovery areas to explore - including significant showings of copper, cobalt, nickel and silver in addition to high-grade gold.

MacDonald Mines’ exploration work to date on the SPJ Project supports a gold-rich IOCG model for the Scadding Deposit (“Scadding”). The objective of the Company’s current 2,000-metres drill program at Scadding is to confirm and expand the high-grade gold zones of the deposit. To date, one (1) of six (6) holes drilled in the deposit’s North Zone have been reported. Results indicate that the deposit is made up of thick and stacked zones of high-grade gold mineralization (*Sept. 26, 2019 News Release*).

About the newly acquired claims

The claims fill two strategic gaps in a regional uranium anomaly associated with the Scadding Deposit. In addition, near the western boundary of the southern block of claims, MacDonald’s surface mapping program identified, at surface, zones of IOCG alteration enriched in hydrothermal magnetite. This iron oxide enrichment is also outlined by a positive magnetic anomaly in a regional airborne aeromagnetic survey, conducted by previous operators, on the property. An iron oxide alteration overlapped with a positive uranium anomaly is an indicator of potential zones of polymetallic mineralization and a hallmark of IOCG systems.

Quentin Yarie, MacDonald’s President and CEO commented: “The addition of these new claims fills some gaps in our property package. We know that the IOCG mineralization on the property extends beyond the footprint of the Scadding Mine and this acquisition provides us an opportunity to further investigate the uranium and iron oxide anomalies that are associated with the Scadding Deposit.”
